

Keypad experiment

Overview

This lesson will teach you how to use Keypad module, which is simple and easy to use.

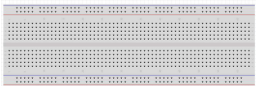

Specification

Null

Pin definition

Null

Hardware required

Material diagram	Material name	Number
	Keypad	1
	USB Cable	1
	UNO R3	1
	Breadboard	1
	Jumper wires	Several

Connection diagram

Sample code

Note: sample code under the **Sample code** folder

You need to add the **Keypad** to the Arduino library file directory, otherwise the compiler does not pass. Please refer to '[How to add library files.docx](#)'.

```
#include <Keypad.h>
const byte ROWS = 4; //four rows
const byte COLS = 4; //four columns
//define the cymbols on the buttons of the keypads
char hexaKeys[ROWS][COLS] = {
    {'1','2','3','A'},
    {'4','5','6','B'},
    {'7','8','9','C'},
    {'*','0','#','D'}
};
byte rowPins[ROWS] = {9, 8, 7, 6}; //connect to the row pinouts of the keypad
byte colPins[COLS] = {5, 4, 3, 2};
//initialize an instance of class NewKeypad
Keypad customKeypad = Keypad( makeKeymap(hexaKeys), rowPins, colPins, ROWS, COLS);

void setup(){
    Serial.begin(9600);
}
void loop(){
    char customKey = customKeypad.getKey();
    if (customKey){
        Serial.println(customKey);
    }
}
```

If you fail to open, use the Adobe reader to open this document.

[byte](#)

Application effect

Open the serial port, and then press one of the buttons and the serial port monitor will be displayed.

* About Smraza:

* We are a leading manufacturer of electronic components for Arduino and Raspberry Pi.

* Official website: <http://www.smraza.com/>

* We have a professional engineering team dedicated to providing tutorials and support to help you get started.

* If you have any technical questions, please feel free to contact our support staff via email at support@smraza.com

* We truly hope you enjoy the product, for more great products please visit our
